

Oncology Therapy Review

Patient Information

Name: William Scott

DOB: June 18, 1967

Email: william.scott@example.com

Allergies: None

Medical Record Number: 334566

Appointment Details

Date: May 26, 2024

Time: 9:15 AM

Doctor: Dr. Emily Rodriguez, MD

Chief Complaint

Review of ongoing immunotherapy for melanoma.

History of Present Illness

William Scott is a 56-year-old male with Stage IV melanoma, diagnosed in December 2022. Currently receiving pembrolizumab. Reports increased energy and improved appetite.

Past Medical History

- Hyperthyroidism

Medications

- Pembrolizumab:** 200 mg IV every 3 weeks
- Methimazole:** 10 mg PO BID

Review of Systems

- Constitutional:** Improved energy, no weight loss
- Respiratory:** No cough, no dyspnea
- Cardiovascular:** No chest pain
- Gastrointestinal:** No nausea, no vomiting

Physical Examination

- General:** Appears healthy, no distress
- Vital Signs:** BP 124/76, HR 68, RR 16, Temp 98.5°F
- Skin:** No new lesions

- **Chest/Lungs:** Clear to auscultation
- **Cardiovascular:** Normal S1/S2, no murmurs

Assessment

- **Stage IV melanoma, responding to pembrolizumab**
- **Hyperthyroidism, controlled**

Plan

1. Continue pembrolizumab therapy.
2. Schedule PET-CT in 6 weeks to assess response.
3. Routine blood tests including thyroid function every 6 weeks.
4. Follow up in 6 weeks to review PET-CT and lab results.
